

## Simulation and Modelling (SYS 3062) | Spring 2026

Henning Mortveit

Associate Professor

Office Hours: TBD at Olsson 102A

Email: [Henning.Mortveit](mailto:Henning.Mortveit)

Gabriel Lawrence

GTA & Lab Instructor

Office Hours: TBD at Olsson

Email: [GabeL](mailto:GabeL)

Madeline Priebe

Teaching Assistant (UVAccelerate)

Office Hours: TBD at Olsson

Email: [map7cma](mailto:map7cma)

Eli Cook  
Teaching Assistant (UVAccelerate)  
Office Hours: TBD at Olsson  
Email: ugc8nb

Saiesha Gohil  
Teaching Assistant (Undergraduate)  
Office Hours: TBD at Olsson  
Email: rta5nz

Tracy Hua  
Teaching Assistant (Undergraduate)  
Office Hours: TBD at Olsson  
Email: njn4gb

Class Time: Tuesday 09:30 AM - 10:45 AM(ET), 05:00 PM - 06:15 PM, and Thursday 9:30 - 10:45 AM (ET)

Discussion Forum: Piazza for SYS 3062

## Course Information

---

### Course Description:

This course is an introduction to theory and practice for modeling and simulation, two mainstays of system engineering. The course provides a broad foundation covering fundamental principles, paradigms, and practices for modeling and analyzing stochastic systems through computational experiments, aka

simulations. It is a course integrating theory and practice through lectures and lab sessions across topics such as the following:

- Modeling, model verification & validation, types of uncertainties, with examples of types of models. Modeling and simulation through the lens of stochastic processes.
- Techniques theory (SLLN, CLT) for Monte Carlo based simulation analytics (aka "output analysis") used to estimate means and variances of system variables. Statistical independence and lack thereof.
- Construction of single confidence intervals with adjustments for skewness. Construction of multiple, simultaneous confidence intervals and the Bonferroni correction.
- Estimating sample size to generate confidence intervals with prescribed tolerances.
- Spreadsheet-based simulations using the XLRisk plugin.
- The process of distribution modeling (aka "input analysis") for capturing random variables of the system. Goodness of fit assessment through the  $\chi^2$  - and KS-tests. The Phitter tool.
- Simulation logic, common data structures, platforms and architectures (e.g., HLA, cloud solutions). Pipelines and workflows. Data management.
- Queuing systems.
- Random number generators (RNGs) and their role in simulation-based system analysis. Assessing the quality of RNGs. Pitfalls.
- Generating variates from distributions other than  $U(0, 1)$ .
- Selected topics, e.g., agent-based modeling, state machines, comparing alternative systems, simulation optimization; case studies.

#### Learning Objectives:

In your professional careers you will undoubtedly encounter projects and problems where simulation is an option for a solution. The purpose of this course is to provide you with a foundation covering theory and practice for stochastic simulations as a method for the design and analysis of systems.

#### Prerequisites:

SYS 2001, APMA/MATH 3100, and APMA/STAT 3120 or equivalent (you have a question of what is equivalent, please write to Professor Mortveit and Gabe). It is recommended that students have a basic command of linear algebra, calculus, probability, and statistics. We will use Python for simulation and VS Code for our programming sessions. Student are encouraged to familiarize themselves with Python programming, SimPy or Salabim, and VS Code. Some Resources that may be helpful are available at A Sufficient Review of Probability for Engineers (APMA 3100) and A Sufficient Review of Statistics (APMA 3120).

#### Textbook:

- Averill M. Law (2013) Simulation Modeling & Analysis (5th edition)
- Henning Mortveit and Gabriel Lawrence Modelling and Simulation. Available at Github

#### Supplementary literature:

- Discrete Event Simulation, 5th Edition by Banks and et. al.
- Monte Carlo Theory, Methods, and Examples by Art B. Owen

- Hands-On Simulation Modelling with Python by Giuseppe Ciaburro
- Simulation: A Modeler's Approach by James R. Thompson.
- HOW TO DO SYSTEMS ANALYSIS by John E. Gibson William T. Scherer, and William F. Gibson
- A. Tolk, P. Barry, M. L. Loper, G. Rabadi, W. T. Scherer and L. Yilmaz Chances and Challenges of ChatGPT and Similar Models for Education in M&S 2023 Winter Simulation Conference (WSC), San Antonio, TX, USA, pp. 3332-3346, doi: 10.1109/WSC60868.2023.10408241.

#### Attendance:

Official written attendance will not be taken. Hands-On Activities may be administered unannounced during any lecture hour, and online surveys will be conducted in class. A student who misses a Hands-On Activity will not receive credit and will not be offered a Hands-On Activity, unless he/she has given prior notification of absence from lecture to the instructors of the overall course (not the TAs).

#### Software

Some words about specialized software including Simio, Flexsim, Anylogic, and Arena. Our strategy of using Python and XLRisk. That as a professional, you may have to become familiar with one of these.

## Schedule

Disclaimer: The Instructors reserve the right to make changes to the syllabus, including lab, project, homework, ICPS, and exam due dates. These changes will be announced as early as possible.

Final Exam Date: May 3rd, 2026

Release: Lab 4

Tuesday		Thursday	
Jan 13th	1	15th	2
Lecture & Lab: Introduction to Modeling and Simulation		Lecture:	
Release: Homework 1			
20th	3	22nd	4
Lecture:		Lecture:	
Lab 1: Computing $\pi$ with Monte Carlo (MC)		Due: Homework 1	
Release: Lab 1			
27th	5	29th	6
Lecture:		Lecture:	
Lab 2: Retirement with MC			
Release: Homework 2, Lab 2			

Tuesday		Thursday	
Feb 3rd	7	5th	8
Lecture: Lab 3: Portfolios with Confidence! Release: Lab 3, Lab Project 1		Lecture:	
10th	9	12th	10
Lecture: Lab: Project 1 Workday Release: Homework 3		Lecture:	
17th	11	19th	12
Lecture: Lab 4: Advanced Modeling (DES) Due: Lab Project 1		Lecture:	
24th	13	26th	14
Midterm Exam		Lecture:	
Mar 3rd	15	5th	16
Lecture: Lab 5: Queuing and Output Analysis Release: Homework 4, Lab 5		Lecture:	
10th	17	12th	18
Lecture: Lab 6: Simulating Stochastic Processes Release: Lab 6		Lecture:	
17th	19	19th	20
Lecture: Lab 7: Comparing Two Modeling Methodologies Release: Lab 7, Homework 5		Lecture:	
24th	21	26th	22
Lecture: Lab 8: Compartmental Models (Continuous Modeling) Release: Lab 8		Lecture:	
31st	23	Apr 2nd	24
Lecture: Project 2: The Choice Release: Lab Project 2, Homework 6		Lecture:	
7th	25	9th	26
Lecture: Extension, Lab 9: Alternative Systems or SYSML		Lecture:	

Tuesday	Thursday
14th Lecture: Lab Group Workday for Project 2	16th Lecture:
21st Lecture: Lab Project Presentations	23rd Lecture:
28th Course Wrapup	30th

## Student Evaluation and Assessment

---

### Grading:

- Homeworks: 30%
- Hands-On Activities and Prelabs: 5%
- Projects (Mid-Semester and Final): 20%
- Midterm Exam: 20%
- Final Exam: 25%
- Miscellaneous (+/-): Final Grades are Decided using Instructor Discretion.

### Homework:

On Tuesday morning at 10:45 am ET, bi-weekly homework based upon course and laboratory notes will be posted via the Assignments feature on the course Gradescope site. These assignments provide exercises based on the material covered in class and provide the foundation for the exams and projects.

The assignments are designed to assess your knowledge on modeling techniques and their mechanics. These assignments should be done individually or with assistance in Office Hours, include an honor pledge, and be completed by Friday night at 11:59 pm ET, typically a week later. While there is no time limit for these assignments, they are designed not to take more than 3 days. Homework are excellent practice for exams and real-world analysis and should be started early.

### Homework Policies:

1. Homework assignments will be assigned throughout the semester.
2. Your assignments must be neat and legible, or points will be deducted.
3. Your assignments must give details outlining how you got to your solution, or points will not be granted.

4. You will upload your homework through Canvas by the due date and time specified. Typed and written assignments are acceptable.
5. Use of AI for homework and projects is permitted, provided that its role is clearly defined and disclosed.
6. NO LATE HOMEWORKS WILL BE ACCEPTED WITHOUT PRIOR PERMISSION.

## Lab

The lab is an integral part of the course. The hands-on portion of the course is mainly in the lab. And the lab will cover aspects such as creating and configuring a Python environment, a tutorial on the XLRisk Excel plugin, basics of debugging in Python, VSCode and Copilot. There will be a weekly lab assignment that maybe directly connected with lecture or expands on the concepts in lecture.

## Hands-On Activities:

Hands-on activities will be used throughout the course to allow you to practice the methods covered in class, recognize opportunities to apply them in your own work, and discover their shortcomings. Students can still participate in the activities if participating online and will submit their activity on Collab under "Assignments".

## Projects:

The class will have two group projects on real-world topics and data sets. These exercises provide a real-world context for what we learn and are open-ended problem solving experiences that illustrate the concepts of modeling and simulation in practice. Hence, they provide the opportunity to demonstrate understanding of class material using real data to solve a goal-directed problem. Projects are designed to teach students how to perform a detailed analysis as well as how to proficiently communicate results as in a technical document and presentation.

## Exams:

Exams are based entirely on classroom notes and discussions, readings, projects, and laboratory assignments. Each exam will be open book requiring analytical problem solving. The final examination is cumulative. Example questions for both exams are in the in-progress Textbook.

## Course Policies

---

### Submission and Late Submission Policy:

On the day any assignment is due you must submit an electronic copy in pdf (NOT doc or docx, etc.) along with source code on the GradeScope site and pledge your submission. No late assignments will be accepted in this class, unless the student has procured special accommodations for warranted circumstances.

We will be accommodating also due to exceptional circumstances but this is a large class so please make sure this is truly warranted and contact us as soon as possible. In any case you will do better to submit an incomplete assignment rather than a late one.

#### Illness:

We try to create a safe environment, not only for our students, but also for our faculty and our staff. To that end, please stay home or in your dorm room if you are ill with or are symptomatic for any communicable disease. We would rather you stay home and work something out with us for making up work or taking an exam than for an illness to spread through the class. If you believe you are sick, immediately contact Student Health for appropriate treatment or testing at HealthyHoos.

#### Religious Accommodations:

It is the University's long-standing policy and practice to reasonably accommodate students so that they do not experience an adverse academic consequence when sincerely held religious beliefs or observances conflict with academic requirements.

Students who wish to request academic accommodation for a religious observance should submit their request to us by private message on Piazza as far in advance as possible. Students who have questions or concerns about academic accommodations for religious observance or religious beliefs may contact the University's Office for Equal Opportunity and Civil Rights (EOCR) at [UVAEOCR@virginia.edu](mailto:UVAEOCR@virginia.edu) or 434-924-3200.

#### Accessibility Statement:

It is our goal to create a learning experience that is as accessible as possible. If you anticipate any issues related to the format, materials, or requirements of this course, please meet with us outside of class so we can explore potential options. Students with disabilities may also wish to work with the Student Disability Access Center (SDAC) to discuss a range of options to removing barriers in this course, including official accommodations. We are fortunate to have an SDAC advisor, Courtney MacMasters, physically located in Engineering. You may email her at [cmacmasters@virginia.edu](mailto:cmacmasters@virginia.edu) to schedule an appointment. For general questions please visit the SDAC website: [sdac.studenthealth.virginia.edu](http://sdac.studenthealth.virginia.edu). If you have already been approved for accommodations through SDAC, please send us your accommodation letter and meet with us so we can develop an implementation plan together.

#### Academic Integrity Statement:

"The School of Engineering and Applied Science relies upon and cherishes its community of trust. We firmly endorse, uphold, and embrace the University's Honor principle that students will not lie, cheat, or steal, nor shall they tolerate those who do. We recognize that even one honor infraction can destroy an exemplary reputation that has taken years to build. Acting in a manner consistent with the principles of honor will benefit every member of the community both while enrolled in the Engineering School and in the future. Students are expected to be familiar with the university honor code, including the section on academic fraud."

In summary, if assignments are individual then no two students should submit the same source code – any significant, unexplainable overlap in source code of sufficient similarity will be flagged as failure to abide to the Honor Code. You can discuss, you can share resources, you can talk about the assignment but not share code as this incurs an honor code violation. Regardless of circumstances, we will assume that any source code, text, or images submitted alongside reports or projects are of the authorship of the individual students unless otherwise explicitly stated through appropriate means. Any missing information regarding sources will be regarded as a failure to abide by the academic integrity statement even if that was not the intent. Please be careful clearly stating what is your original work and what is not in all assignments.

## Additional Resources

---

### Support for Career Development:

Engaging in your career development is an important part of your student experience. For example, presenting at a research conference, attending an interview for a job or internship, or participating in an extern/shadowing experience are not only necessary steps on your path but are also invaluable lessons in and of themselves. I wish to encourage and support you in activities related to your career development. To that end, please notify me by email as far in advance as possible to arrange for appropriate accommodations.

### Student Support Team:

You have many resources available to you when you experience academic or personal stresses. In addition to your professors, the School of Engineering and Applied Science has staff members located in Thornton Hall who you can contact to help manage academic or personal challenges. Please do not wait until the end of the semester to ask for help!

### Learning:

- Lisa Lampe, Director of Undergraduate Education
- Blake Calhoun, Director of Undergraduate Success
- Courtney MacMasters, Accessibility Specialist
- Free tutoring is available for most classes

### Health and Well-being:

- Assistant Dean of Students
- Elizabeth Ramirez-Weaver, CAPS counselor
- Katie Fowler, CAPS counselor

You may schedule time with the CAPS counselors through Student Health. When scheduling, be sure to specify that you are an Engineering student. You are also urged to use TimelyCare for either scheduled or on-demand 24/7 mental health care.

### Community and Identity:

The Center for Connection in Engineering (CCE) is a student space dedicated to connecting groups in Engineering. It exists to connect students with the academic, financial, health, and community resources they need to thrive both at UVA and in the world. The CCE includes an open study area, event space, and staff members on site. Through this space, we affirm and empower participation and provide the resources necessary for students to be successful during their academic journey and future careers.

### Harassment, Discrimination and Interpersonal Violence:

The University of Virginia is dedicated to providing a safe and equitable learning environment for all students. If you or someone you know has been affected by power-based personal violence, more information can be found on the UVA Sexual Violence website that describes reporting options and resources available - [www.virginia.edu/sexualviolence](http://www.virginia.edu/sexualviolence).

The same resources and options for individuals who experience sexual misconduct are available for discrimination, harassment, and retaliation. UVA prohibits discrimination and harassment based on age, color, disability, family medical or genetic information, gender identity or expression, marital status, military status, national or ethnic origin, political affiliation, pregnancy (including childbirth and related conditions), race, religion, sex, sexual orientation, veteran status. UVA policy also prohibits retaliation for reporting such behavior.

If you witness or are aware of someone who has experienced prohibited conduct, you are encouraged to submit a report to Just Report It ([justreportit.virginia.edu](http://justreportit.virginia.edu)) or contact EOCR, the office of Equal Opportunity and Civil Rights.

If you would prefer to disclose such conduct to a confidential resource where what you share is not reported to the University, you can turn to Counseling & Psychological Services (CAPS) and Womens Center Counseling Staff and Confidential Advocates (for students of all genders).

As your instructors, know that we care about you and your well-being and stand ready to provide support and resources as we can. By University Policy, all of us are responsible employees, which means that we are required by federal law to report certain kinds of conduct that you report to us to the University's Title IX Coordinator. The Title IX Coordinator's job is to ensure that the reporting student receives the resources and support that they need, while also determining whether further action is necessary to ensure survivor safety and the safety of the University community.
